

Loukik Kokate

Software Engineer (Full Stack)

Pune, Maharashtra | +91-9096819628 | loukikkokate87@gmail.com

Professional Summary

Software Engineer with 1.8+ years of experience architecting, building, and deploying production-grade web applications using React.js, Next.js, Node.js, and PostgreSQL. Specialized in designing high-throughput REST APIs, real-time event-driven systems, and database-intensive applications with Redis caching, WebSocket communication, and third-party integrations. Proven ability to optimize performance, implement secure authentication, and build scalable multi-tenant architectures. Experienced in CI/CD pipelines, Docker containerization, and cloud deployments. Strong Agile collaborator with a track record of mentoring junior developers and delivering under tight deadlines.

Technical Skills

- **Frontend:** React.js, Next.js (SSR/SSG/ISR), Redux, Context API, JavaScript (ES6+), TypeScript, HTML5, CSS3, Tailwind CSS, Material UI
- **Backend:** Node.js, Express.js, REST API Architecture, GraphQL (Basic), JWT, OAuth 2.0, WebSocket (Socket.io), Middleware, Rate Limiting, Validation
- **Database & Caching:** PostgreSQL, MongoDB, MySQL, Redis (Caching, Sessions, Pub/Sub), Schema Design, Indexing, Query Optimization, Aggregation Pipelines
- **DevOps & Cloud:** Git, GitHub, Docker, AWS (EC2, S3, CloudWatch), Vercel, Render, Nginx (Basic), Linux CLI
- **Concepts:** DSA, System Design, Microservices, Event-Driven Architecture, Performance Optimization, Agile/Scrum, Jira, Notion

Professional Experience

Software Engineer (Full Stack)

SDK Infotech Pvt Ltd | Sept 2024 – Present

- Architected and developed production-grade full-stack applications using React.js, Next.js, Node.js, and PostgreSQL/MongoDB — serving concurrent users with optimized response times and 99%+ uptime
- Designed RESTful API architectures with versioning, structured error handling, rate limiting, and Swagger docs — integrated with payment gateways (Stripe, Razorpay), CRM systems, and third-party services
- Implemented Redis caching and session management that reduced database load by 40% and improved API response times from 320ms to under 180ms across critical endpoints
- Built reusable frontend component libraries with React.js custom hooks, Context API, and lazy loading — reducing bundle size by 35% and improving Lighthouse performance scores
- Engineered real-time features using Socket.io with Redis Pub/Sub, handling 500+ concurrent WebSocket connections with auto-reconnection and graceful degradation
- Optimized database queries through indexing, query plan analysis, and aggregation pipelines — reducing complex report generation from 12s to under 2s
- Implemented JWT + refresh token rotation, OAuth 2.0, RBAC, input sanitization, CSRF protection, and rate limiting across all public endpoints
- Conducted code reviews, established coding standards, and mentored 3 junior developers on API design, Git workflows, and production debugging

Key Projects

1. Society Service Management Platform

Tech Stack: React.js, Next.js, Node.js, Express.js, MongoDB, Redis, JWT, Tailwind CSS, Vercel, Render

- Designed end-to-end service request lifecycle (Pending → Accepted → In Progress → Completed) with automated provider assignment based on availability and category
- Built RESTful APIs with pagination, filtering, and search — handling 1000+ requests with optimized MongoDB aggregation pipelines and indexed queries
- Implemented JWT auth with refresh tokens and RBAC for residents, providers, and admins; built admin dashboard with real-time analytics and provider performance metrics
- Deployed with frontend on Vercel (CDN-optimized) and backend on Render with CI/CD via GitHub Actions

2. AI-Powered Content Aggregator & Analytics Dashboard

Tech Stack: React.js, Next.js, Node.js, Python (FastAPI), PostgreSQL, Redis, Socket.io, Docker, AWS S3

- Architected microservices-inspired backend — separate Node.js services for data ingestion (cron-based API polling), Python FastAPI for NLP processing, and a REST/WebSocket gateway serving the React frontend
- Built data ingestion pipeline fetching from 5+ external APIs (NewsAPI, Reddit, RSS feeds) with retry logic, rate limit handling, and deduplication using content hashing

- Integrated Python sentiment analysis (TextBlob/VADER) and keyword extraction via FastAPI, communicating with Node.js backend through Redis message queues
- Developed interactive dashboard with Recharts — real-time sentiment trends, topic heatmaps, source comparisons, and filterable content feeds with infinite scroll
- Implemented PostgreSQL full-text search (tsvector/tsquery) across 100K+ articles with materialized views for pre-computed analytics and automated daily refresh

Education

Master of Computer Application (MCA) — Jain University, Bangalore

Bachelor of Computer Application (BCA) — Rani Channamma University, Belagavi
